FastPatch Polymer Repairs  
Product Statement

# RETURN TO SERVICE SOONER WITH FASTPATCH POLYMER KITS AND SYSTEMS

FastPatch Polymer bonds tenaciously and remains flexible throughout its service life.

FastPatch cures in just a few minutes, allowing for quick return-to-service times. It is also cold-applied, which makes it safe to use and means it will not push/shove after it is installed.

## What is FastPatch Polymer?

FastPatch Polymer is a high-performance range of polymer sealant and repair kits and systems, enabling the rapid repair and rehabilitation of common concrete faults such as cracking and spalling. It **provides greater tensile strength and flexibility than traditional powder and cement-based sealants** and repair products.

## What can it be used for?

FastPatch Polymer repair and sealant kits and systems can be used with great success for pavements, roads, runways and other expedient pathways. It is ideal for a diverse range of applications **when repairs are required to be carried out quickly** and with a minimum of disruption. Applications for use are ideal for but not limited to:

- Full/partial depth spalls
- Cracks
- Dowel bar retrofit repair
- Joint fillings (transverse and longitudinal)
- Headwall
- Joint filling

# WHAT ARE ITS BENEFITS?

## Environmental

Cleaner and less mess than traditional powder-based repair products, it also **requires no water**, unlike traditional powder-based repair products.

## Speed

Quick curing and cold applied, the FastPatch Polymer products range provides **fast return-to-service strength** that means less disruption to critical infrastructure.

## Durability

FastPatch Polymer's properties **improve structural utility**, which makes for longer service life with fewer replacement requirements.

## Convenience

The FastPatch Polymer range enables repairs to be **completed sooner, allowing for minimal disruption** to vital services and a quicker return to business as usual.

## Why use Eifers for polymer repairs?

Eifers are the experts in time-critical civil construction works, with a specialised focus on rapid deployment concrete technologies. At Eifers, we've utilised the FastPatch Polymer products for time-sensitive repairs including roads, runways and other critical infrastructure. Eifers can also supply FastPatch Polymer products in smaller quantities for all project sizes.

Eifers is a family-owned Australian company with an agile and innovative approach to civil construction.

Founded by the Eifermann family in 2003 Eifers grew from a small business base to a company focused on civil construction and critical infrastructure works. Eifers stands apart by being the experts in time-critical concrete, providing services to public and private sector clients across industries and environments including airports, roads, rail, urban development and utility infrastructure. Eifers utilises materiality, machines and methodologies to complete works faster and safer, giving clients value for money results.
